Industrial Visit Report

Inphora Pvt.Ltd

Date-03-03-2026

Date of Visit: April 13, 2026 (Monday)

Organized By: Faculty of Sciences & Technology(FST),The ICFAI University, Himachal Pradesh

Class: Students of technology.

An industrial visit to Inphora was organized by our department to provide practical exposure to students about the working environment of the IT industry. The main objective of this visit was to understand real-time industrial operations, interact with professionals, and gain knowledge about emerging and running technologies used in the company.

About the Company

Future Finders is a technology-based company that provides training and development services in modern IT fields such as Cyber Security, and Digital Marketing. The company focuses on skill development, innovation, and preparing students for industry requirements.

Interactions:

During the visit, students had the opportunity to interact with members of departments. Each department explained its roles and responsibilities in detail:

1. Web Technology Department

The team explained how modern websites and web applications are developed using current tools and frameworks. They demonstrated frontend and backend integration, database management, and deployment processes. Students learned about real-world project development and industry practices.

2. AI Development Department

The AI experts introduced the fundamentals of artificial intelligence and its applications. They explained how intelligent systems are developed using data and algorithms, including examples such as chatbots, automation systems, and predictive models. Students actively interacted and explored career opportunities in AI.

3. Cyber Security Department

This department focused on data protection and ethical hacking. The team explained various cyber threats, security measures, and real-world case studies. They also discussed certifications and career scope in the cyber security field.

4. Digital Marketing Department

The digital marketing team introduced concepts like SEO, social media marketing, and online branding strategies. They explained how businesses grow using digital platforms and tools to reach wider audiences. They also explained how these technologies are applied in real-time projects and their importance in shaping the future of the IT industry.

Practical Demonstration

Students were shown live project demonstrations, including website development processes and application deployment. The team explained project management methods like Agile methodology and how teams collaborate using tools like Git and project management software.

Learning Outcomes

From this visit, students gained:

- Practical knowledge about the functioning of an IT company
- Understanding of teamwork and professional communication
- Awareness of the latest technologies and industry trends
- Guidance on career opportunities in various IT domains

The industrial visit to **Inphora Pvt. Limited** was highly informative and beneficial. Students gained valuable insights into real-world industrial practices, emerging technologies, and professional work environments. The interaction with industry experts helped enhance their understanding of various IT domains such as Web Technology, Artificial Intelligence, Cyber Security, and Digital Marketing. Overall, the visit provided meaningful practical exposure and will contribute to students' academic and professional development in the IT field.
